# Web experiments and test collections: Are they meaningful?

Nick Craswell CSIRO Mathematical and Information Sciences Canberra, Australia

David Hawking and Nick Craswell coordinate the TREC Web experiments.

### Introduction: TREC (Web) experiments

- **x** Many groups participate in the same experiment, with fixed queries, documents and "goals".
  - **x** Many groups: Invention and confirmation
  - **x** Central judging: Blind and fair
  - **x** Static crawl. Reproduce results. Reusable?
  - **x** Debate on methodology
- **x** (We know what works in TREC ad hoc. Meaningful.)
- **x** Web. What works?

#### History of the TREC Web track

**1998** Link ranking papers. No WT.

WT99–WT01 Web data and short queries.

Meaning: Links  $\Rightarrow$  Relevance

**2001** SIGIR: Searching for home pages by name

Links  $\Rightarrow$  Home pages Full text search  $\Rightarrow$  Home pages

**WT01** Links and URL type  $\Rightarrow$  Home pages (meaningful)

WT02 GOV, Named pages & Topic distillation

## **Topic distillation**

# Some issues

- **x** Binary judgments
- **x** Can't do Google-scale experiments
  - **x** Commercially interesting: Site, enterprise, 'GOV'
- **x** Site-site and enterprise-enterprise variation
- **x** Need:
  - **x** Keep developing methodology (ideas and criticism)
  - **x** Find out what works (e.g. anchors)
