The image shows a screenshot of the Wikipedia website for the article "Coffee". The browser address bar shows the URL "http://en.wikipedia.org/wiki/Coffee". The page features the Wikipedia logo, a navigation menu, a search box, and the main article text. The article text describes coffee as a beverage, its production, and its status as a commodity. It includes a photograph of a cup of coffee and a section for "Etymology and history".

## Coffee

From Wikipedia, the free encyclopedia

**Coffee** is a [beverage](#), served hot or with [ice](#), prepared from the roasted [seeds](#) of the [coffee plant](#). These seeds are almost always called **coffee beans**. Coffee is the second most commonly traded [commodity](#) in the world, trailing only [petroleum](#). A total of 6.7 million tonnes of coffee were produced annually in 1998-2000, forecast to rise to 7 million tonnes annually by 2010.<sup>[1]</sup> Coffee is one of humanity's chief sources of [caffeine](#), a [stimulant](#). Its potential benefits and hazards have been, and continue to be, widely studied and discussed.

Coffee in beverage form

[edit]

### Etymology and history

The word entered English in 1598 via Italian *caffè*, via Turkish *kahve*, from Arabic *qahwa*, meaning "to have no appetite," as in to have no appetite for sleep. Its ultimate

### Call for Papers

Semantic Web technologies have matured to the point where they are being adopted by many organizations for applications as diverse as data integration, optimized search, and decision support. The increasing use of the technology has resulted from mainstream commercial software vendors providing solutions that support Semantic Web technologies, and W3C making RDF and OWL standard recommendations.

### ASWC2006

ASWC2006 is the 1st Annual Semantic Web Conference, which will be held on October 9-10, 2006 in Berlin, Germany. It is the first conference in the Semantic Web series.

article discussion edit history protect delete move watch refresh

### RuleML2006

RuleML2006 is the Second International Conference on Rules in Artificial Intelligence for the Semantic Web. It is held from November 9-10 2006 in Berlin, Germany. For more information, see <http://www.ruleml.org/>

Call for Papers

Semantic Web technologies have a wide range of applications as diverse as data integration, information transformation and knowledge discovery. The technology has resulted from mainstream Web technologies, and W3C making it a standard. It is widely recognized that rules are a key technology for the integration, transformation and knowledge discovery in a transparent manner. The rules landscape features three aspects of rule markup; engineering, semantics and logic. Recent Rules Interchange Format (RIF) and Rule Markup Languages (RML) complement and extend ontologies as a means to specify ontologies. Rules are also used to describe events, discover patterns, and more.

The rules landscape features three aspects of rule markup; engineering, semantics and logic. Recent Rules Interchange Format (RIF) and Rule Markup Languages (RML) complement and extend ontologies as a means to specify ontologies. Rules are also used to describe events, discover patterns, and more.

Meeting Format

The RuleML-2006 Conference is aimed to be the premier scientific forum for exchanging ideas on all aspects of rules for the Semantic Web. It follows on the heels of three successful workshops on the topic, in 2002, 2003, and 2004, and the first RuleML conference that took place in 2005. Like its precursors, RuleML-2006 will be held in collaboration with the International Semantic Web Conference (<http://iswc2006.semanticweb.org/>) and will be co-located with it. The RuleML-2006 Conference will consist of both an academic track and an industry track.

# Using Wikipedia

**New  
Conference**

## Wikipedia is not perfect

- Using Wikipedia means reading articles
  - Manual indexes are no real solution ([List of coffee companies](#), European cities, [List of asteroids named after people](#), ...)
- Inconsistencies between different language versions
  - Find inconsistencies between different language versions, e.g. Population of [Edinburgh](#) (as of 17.05.2006)
    - En: 448,624, no date
    - De: 435.790 in 2005
    - Fr: 448 624 in 2001
    - Dk: 453.670 in 2004
- Problem: No access to **data** in articles

# Can the Semantic Web help?

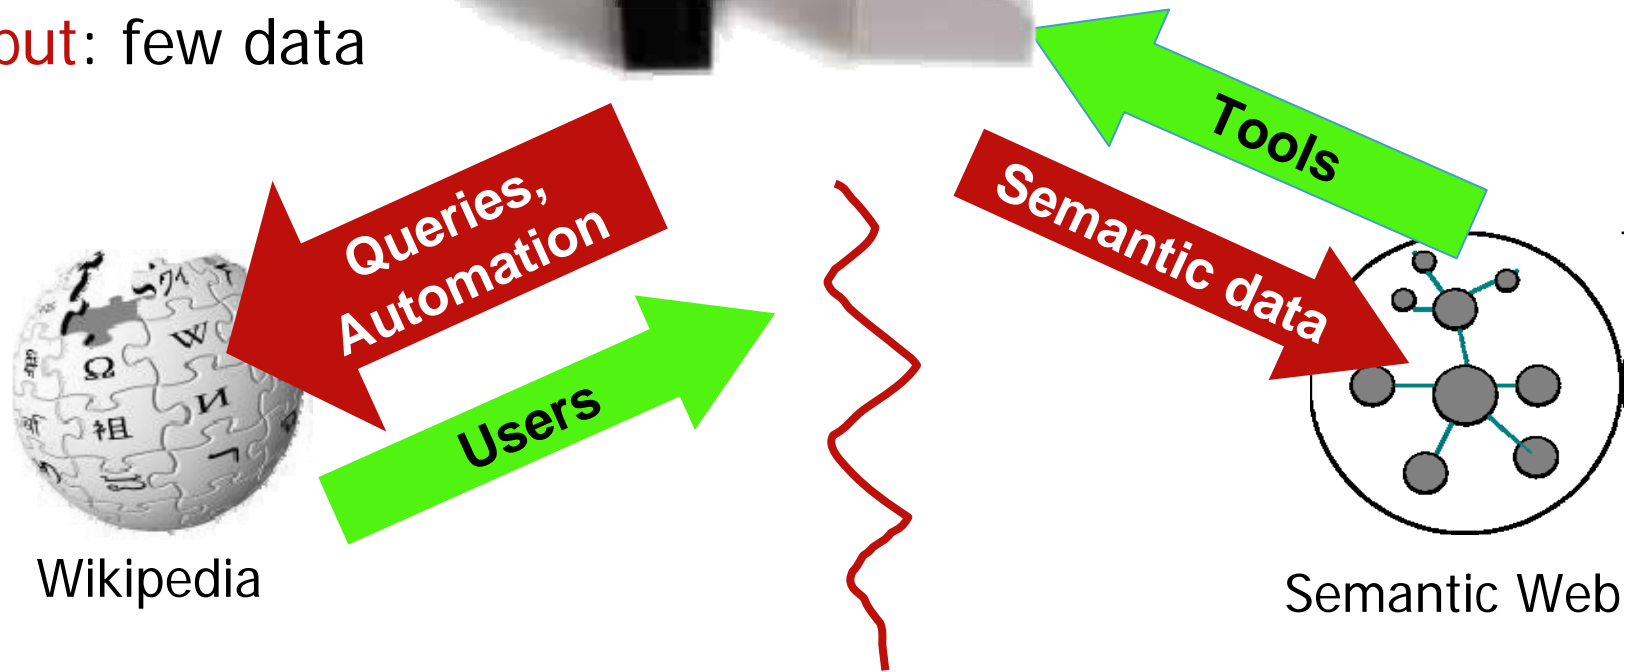

# Analysis

- Wikipedia has many users and data,  
**but**: many manual processes, only text-based search
- Semantic Web has tools for information processing,  
sophisticated queries,  
**but**: few data

# Goal: Marrying Wikipedia and the Semantic Web

- Wikipedia has many users and articles, **but**: many manual processes and text-based search
- Semantic Web has sophisticated data processing, **but**: few data

# Requirements for

- Wikipedia:

- Must be very easy to use
- Must have immediate benefit for the users
  - Lists, Inconsistencies, Better Search
- Must be efficiently implemented
  - Currently 12,000 hits/second

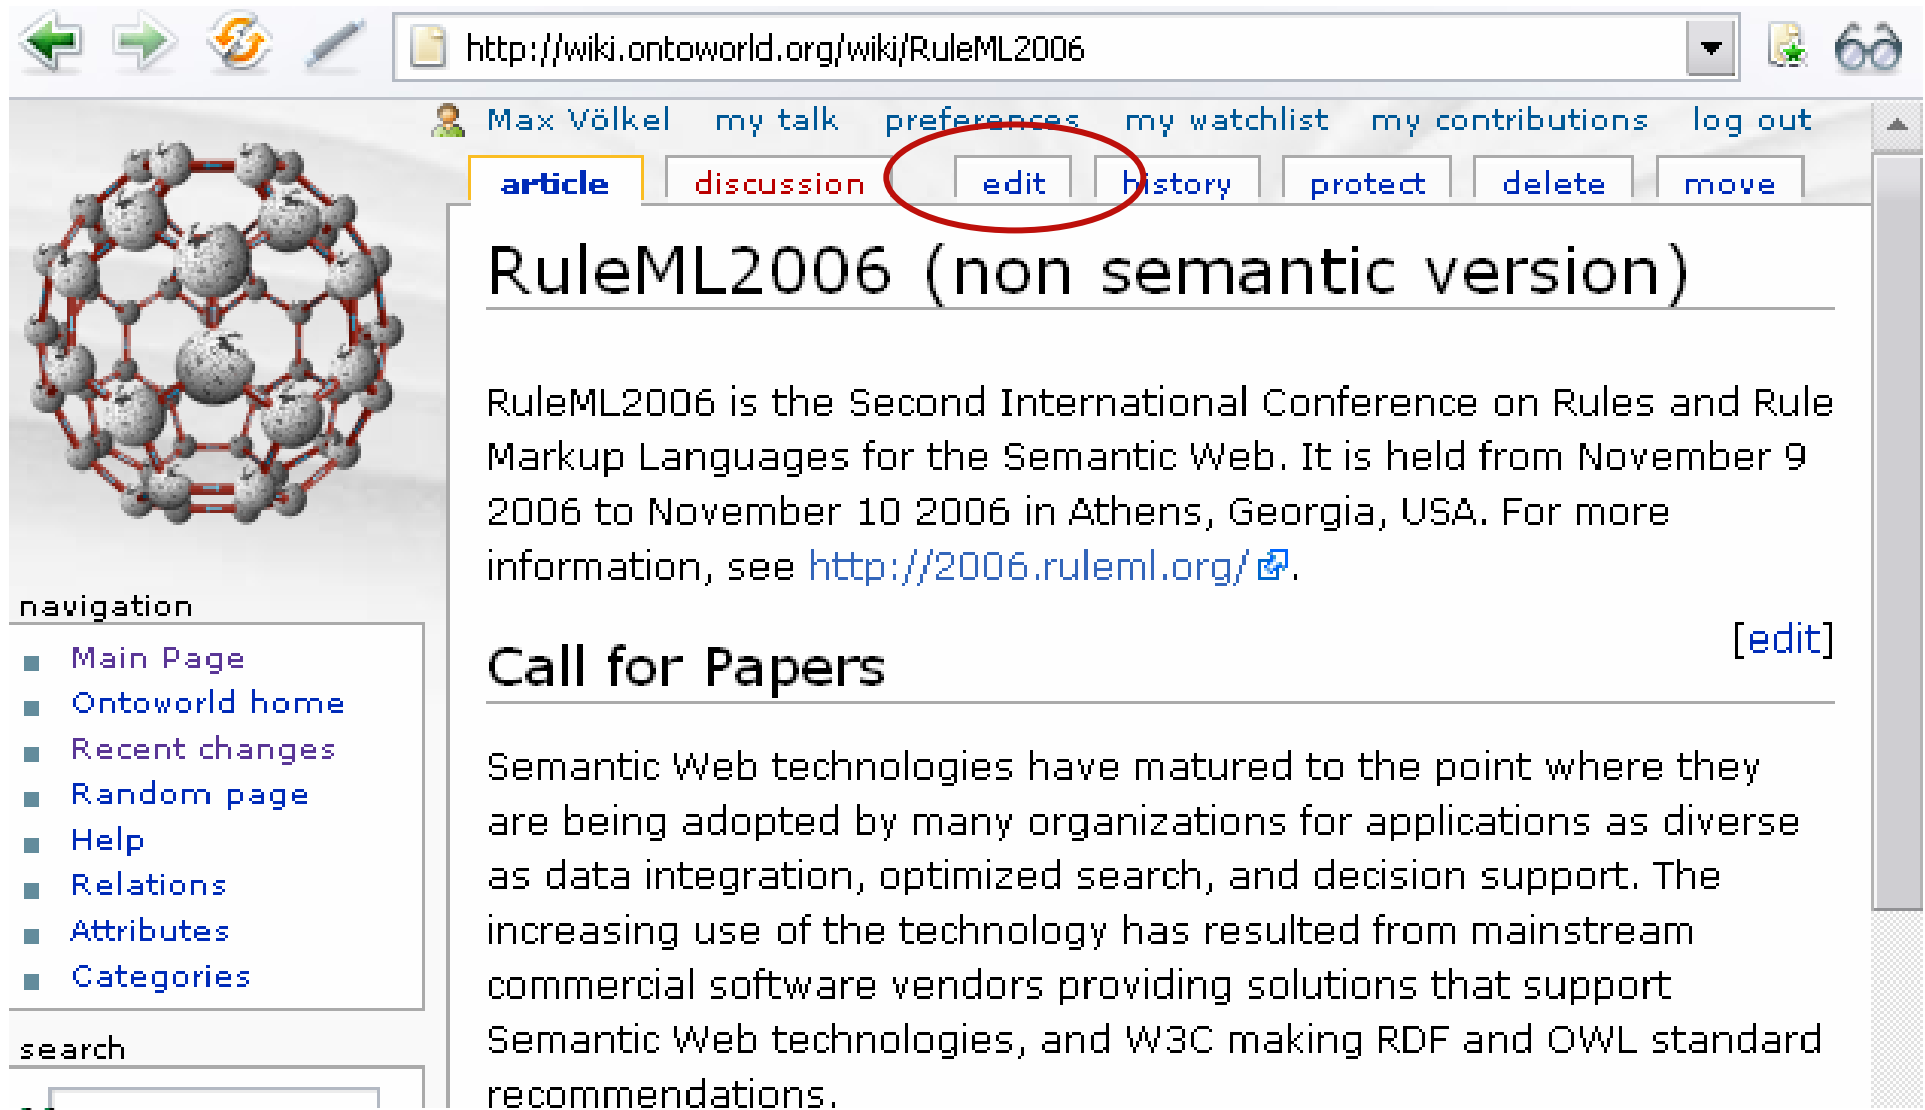

- Semantic Web:

- Must have export of semantic data
- Nice to have SPARQL access
- Must integrate with existing vocabularies

We go to the article on the RuleML2006 conference ...

```

# Information resources vs. abstract concepts (http range-14)

## Did I get that right?

- Everybody can create any relation or attribute?
  - Yes
- Each relation and each attribute have their own wiki-article
  - Relation:located in
  - Attribute:population
- Can I have class hierachies, datatypes and all this?

## Mapping Wiki Concepts to OWL

Semantic MediaWiki	Syntax	OWL
Link	[[Scotland]]	-
Relation	[[located in::Scotland]] [[contains::Caffeine]]	owl:ObjectProperty
Attribute	[[population:=5,062,011]] [[length:=17 km]]	owl:DatatypeProperty
Category	[[Category:Monarchies]]	owl:Class

## Why typed links?

- Cheap annotations
  - Content (links, values) is already there, just mark them up
- Content and annotations are one
  - DRY – don't repeat yourself
  - Metadata doesn't get out of sync
- Defined annotation process
  - Authors are annotators
- Locality of annotation
- User interface
  - No new tool to learn
  - Total control over annotations
- Wiki-style: No structure imposed
  - All relations and attributes can be used

## Benefits for the Semantic Web

- Wikipedia as URI source (see Workshop IRW2006)
  - Simple social process: Prefix article name with an underscore
- RDF/OWL Data export
  - Header links to RDF file (PiggyBank, OINK, Tabulator)
  - Per page or bulk
  - Everything has an rdf:label
  - All properties have rdfs:isDefinedBy
  - XSD datatypes fully supported
- Semantic Web food chain
  - SPARQL endpoint
  - SPARQL tools (SNORQL)

## Benefits for Wikipedians: <ask> for your data

- Inline queries allow for questions like ...
  - ... movies from the 70s starring Sean Connery
  - ... **list of events (all conferences and workshops)**

```
<ask format="ul" link="all">  
  [ [Category:Event] ]  
</ask>
```

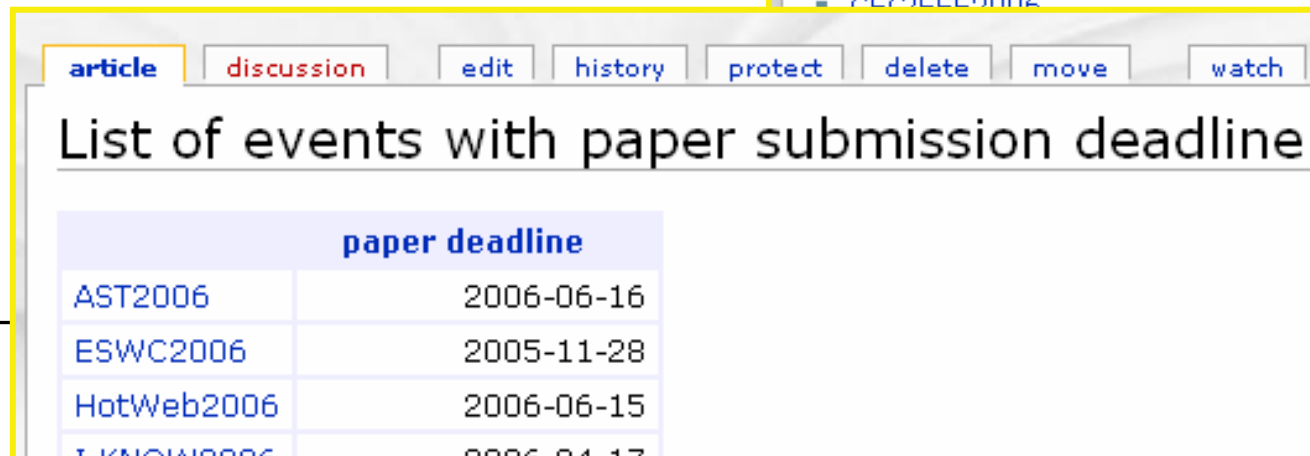

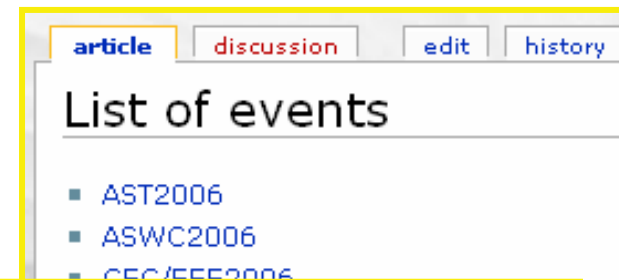

# Benefits for Wikipedians: <ask> for your data

- Inline queries allow for questions like ...
  - ... movies from the 70s starring Sean Connery
  - ... **list of events with their deadline**

```
<ask format="ul" link="all">  
  [[Category:Event]]  
  [[paper deadline:=*]]  
</ask>
```

## Benefits for Wikipedians: <ask> for your data

```
<ask format="ul" link="all">  
  [[Category:Event]]  
  [[paper deadline:=>June 1 2006]]  
  [[paper deadline:=<December 31 2006]]  
  [[title:=*]]  
  [[paper deadline:=*]]  
  [[Category:Topic Semantic Web query  
languages]]
```

</ask>

	title	paper deadline
<a href="#">RuleML2006</a>	Second International Conference on Rules and Rule Markup Languages for the Semantic Web	2006-06-05

# Applications

- Automatic tables and lists
  - E.g. Countries sorted by area, population, alphabet, ...
- **Maintenance** with hand crafted checks
  - Does every country have one capital?
- Integration in applications
  - `latte = wikipedia.get("Latte Macchiatto");`  
`print latte["contains"]`
- Visualization and browsing
- ... And many unexpected ones

## Who is using Semantic MediaWiki?

- Our research group

- Wikicompany [🔗](#) ~ 9.000 pages, 227 user accounts
- The Bible Wiki [🔗](#) ~ 40.000 pages, 156 user accounts
- WWW2006 Social Wiki [🔗](#) ~ 40 pages, 34 user accounts
- Semantic eGovernment Community Portal [🔗](#), ~ 30 pages
- ScubaWiki [🔗](#), ~ 170 pages, 33 user accounts
- NeOn Wiki [🔗](#) ~10 pages
- this wiki = [Wiki.Ontoworld.org](#) [🔗](#) ~400 pages, 158 user accounts
- SounceryForge [🔗](#) ~1864 pages, 272 user accounts

## Features

- Linking of concepts with external URIs
    - `[[equivalent URI:= ... ]]`
    - → owl:equivalentClass, owl:equivalentProperty, owl:sameAs
  - OWL import (generates pages from ontology)
  - All relations and attributes can be documented
  - Re-use of existing Category-system
  - Annotating templates for a quick win
  - Correct RDF export
- Flexible system for collaboratively creating content with semantic annotations

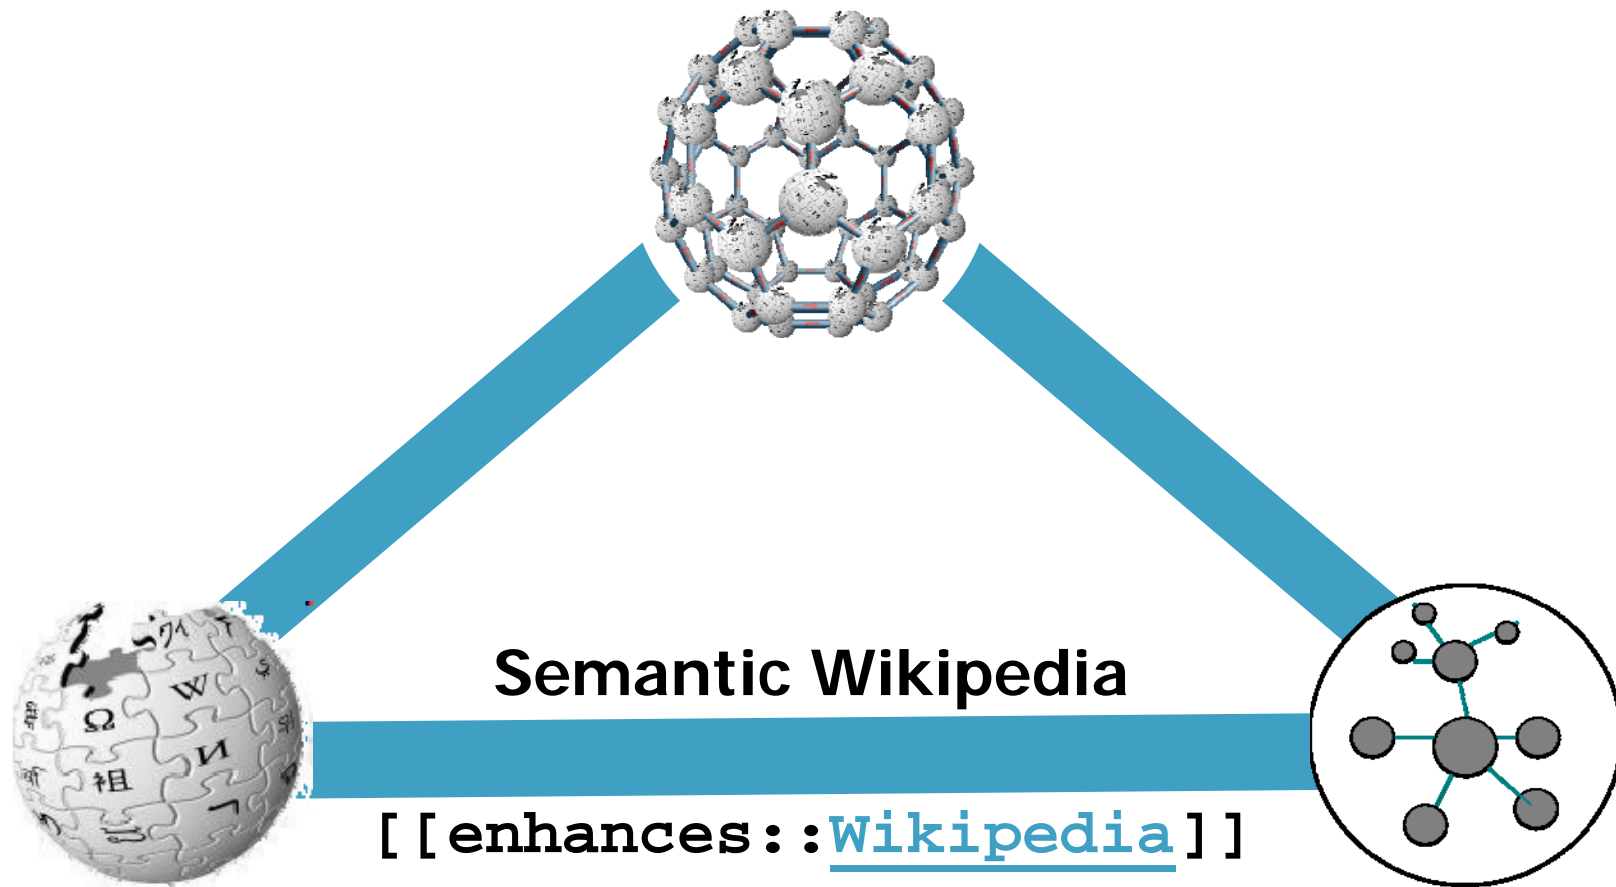

## Future Work

- Performance
- Performance
- Scalability
  
- More Expressiveness
  - Transitive, symmetric, and inverse relations
- User Interface
  - Suggested relations and attributes
- Evaluation

## Conclusions

- **Annotation for the masses**
- **“Soft” introduction**
  - People are often scared about Semantic Web
  - Semantic features can be ignored
- **Content and metadata are one**
- **Linking to existing ontologies**
- ***Create the egg of the chicken-and-egg problem***

# Thank You!

## Conclusions

- Annotation for the masses
- “Soft” introduction
- Content and metadata are one
- Linking to existing ontologies
- *Create the egg of the chicken-and-egg problem*

## Semantic Wikipedia

[ [ enhances : : [Wikipedia](#) ] ]

Comments or questions?

## Questions and Answers

- Everybody can create any relation or attribute?
  - Yes
- How are Relations created?
  - You just use them!
- Can people agree on relation types?
  - They did already with categories. We hope it works again.
  - Every Relation has it's own wiki page for documentation.
    - Relation:located in, Attribute:population
- Can I make statements about relations?
  - Yes, but no OWL-Metamodelling
