Application Semantic Wiki

Wiki World

- **Wiki** is a website where users can add, modify, or delete content via a web browser
- **Wiki software (wiki engine)** : implementation
- **Application (enterprise) wiki** is a wiki engine where users can create/modify applications into the wiki page (ex: XWiki, TWiki)
- **Semantic wiki** is a wiki that uses models of knowledge (i.e: Semantic Media Wiki)

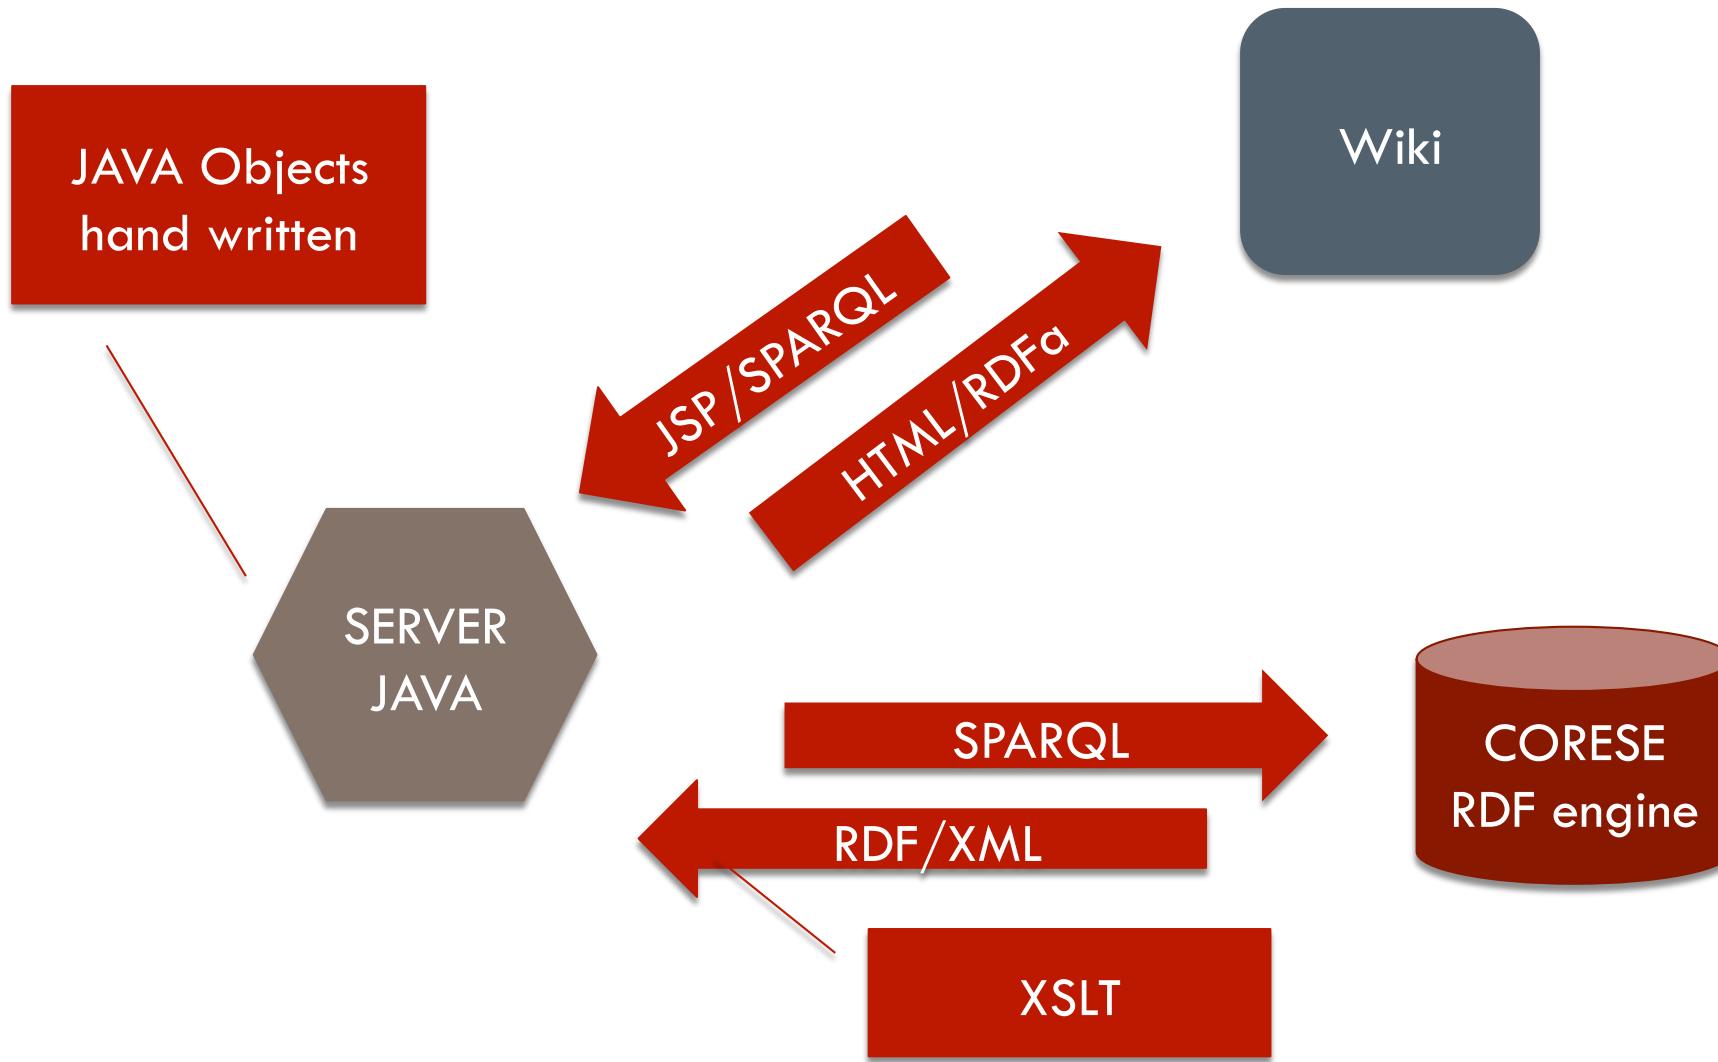

WikiNext

- Semantic Wiki:
 - ▣ Write collaboratively semantized documents
- Application Wiki :
 - ▣ Write applications within the wiki
 - ▣ Take advantages of the Linked Open Data,
- Take advantages of the new technologies : Web Services, HTML5, WebSockets, etc.

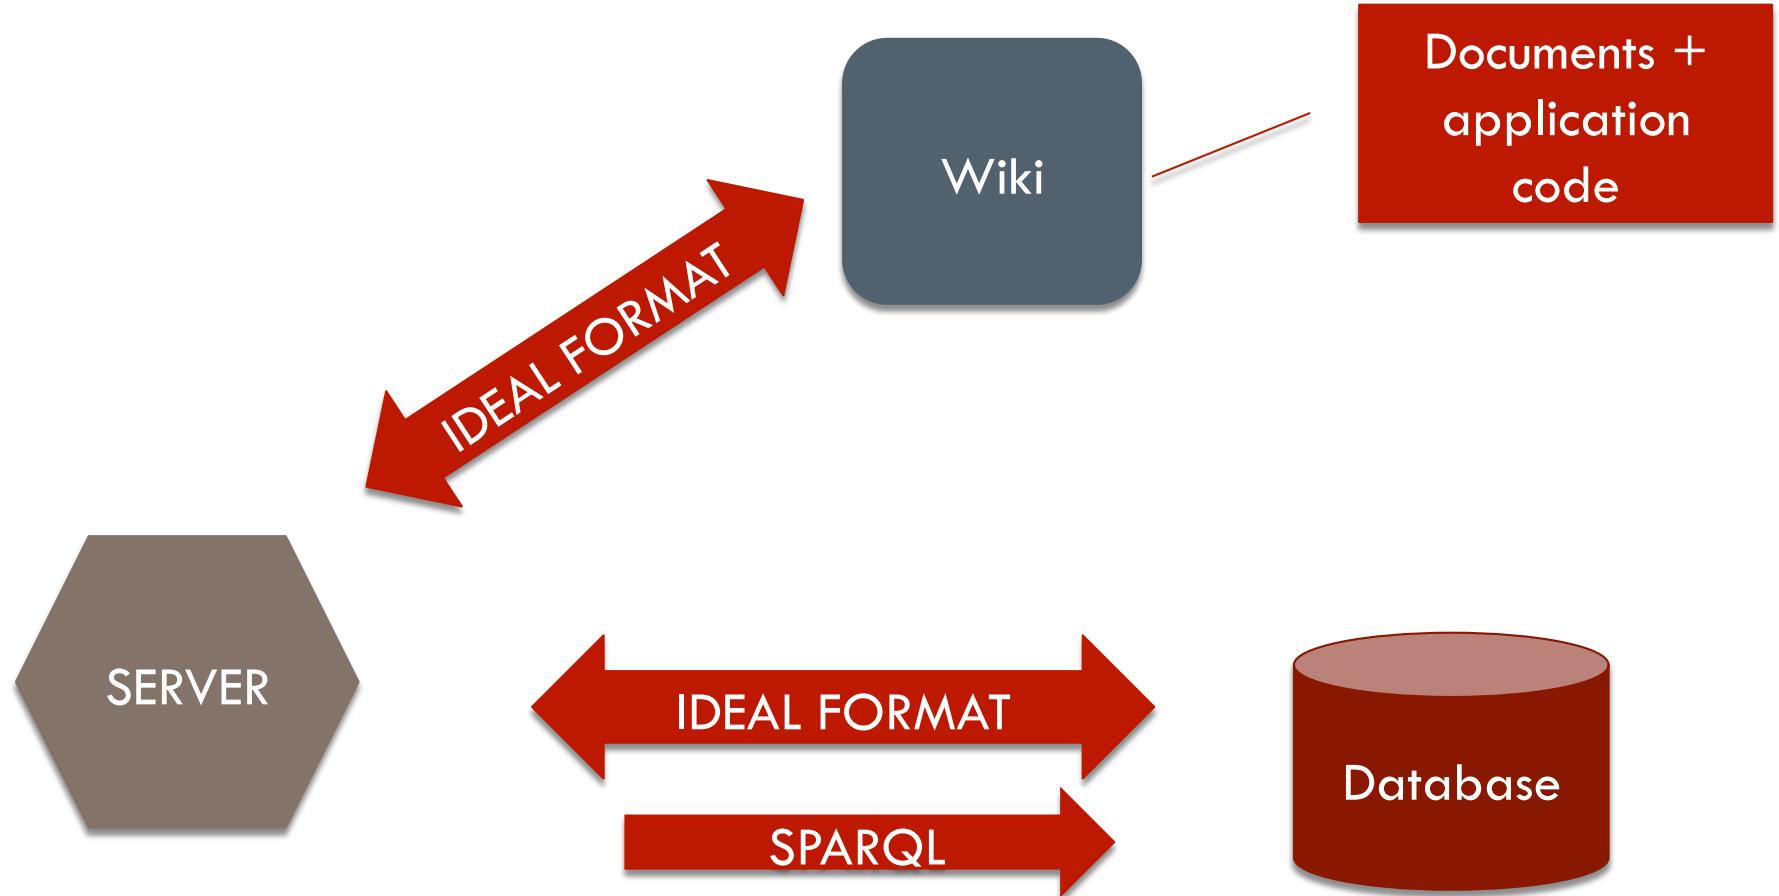

Choosing technology

- Programming language
 - ▣ Simply, untyped
 - ▣ Easy to learn for users
- Unified representation format for data and meta-data
 - ▣ RDF/RDFa Triples
 - ▣ Documents
 - ▣ Applications

The SweetWiki way (2005-2009)

Modern way

Browsers

- Browser = Layout engine + JavaScript engine
 - ▣ Google Chrome (WebKit + V8)
 - ▣ Safari (WebKit + Nitro)
 - ▣ Mozilla FireFox (TraceMonkey)
 - ▣ Opera (Caracan)
 - ▣ Internet Explorer
- And...

JavaScript engines are independent

- V8 by Google
- TraceMonkey by Mozilla
- SpiderMonkey by Mozilla
- Rhino by Mozilla
- Nitro by Apple
- Caracan by Opera
- And JS is no more a web-browser only language !

CommonJS

- Specification to create server-side applications based on JS engine
- Open proposal system with voting on mailing list
- Used in:
 - ▣ CouchDB
 - ▣ MongoDB
 - ▣ SproutCore
 - ▣ node.js
 - ▣ XULJet

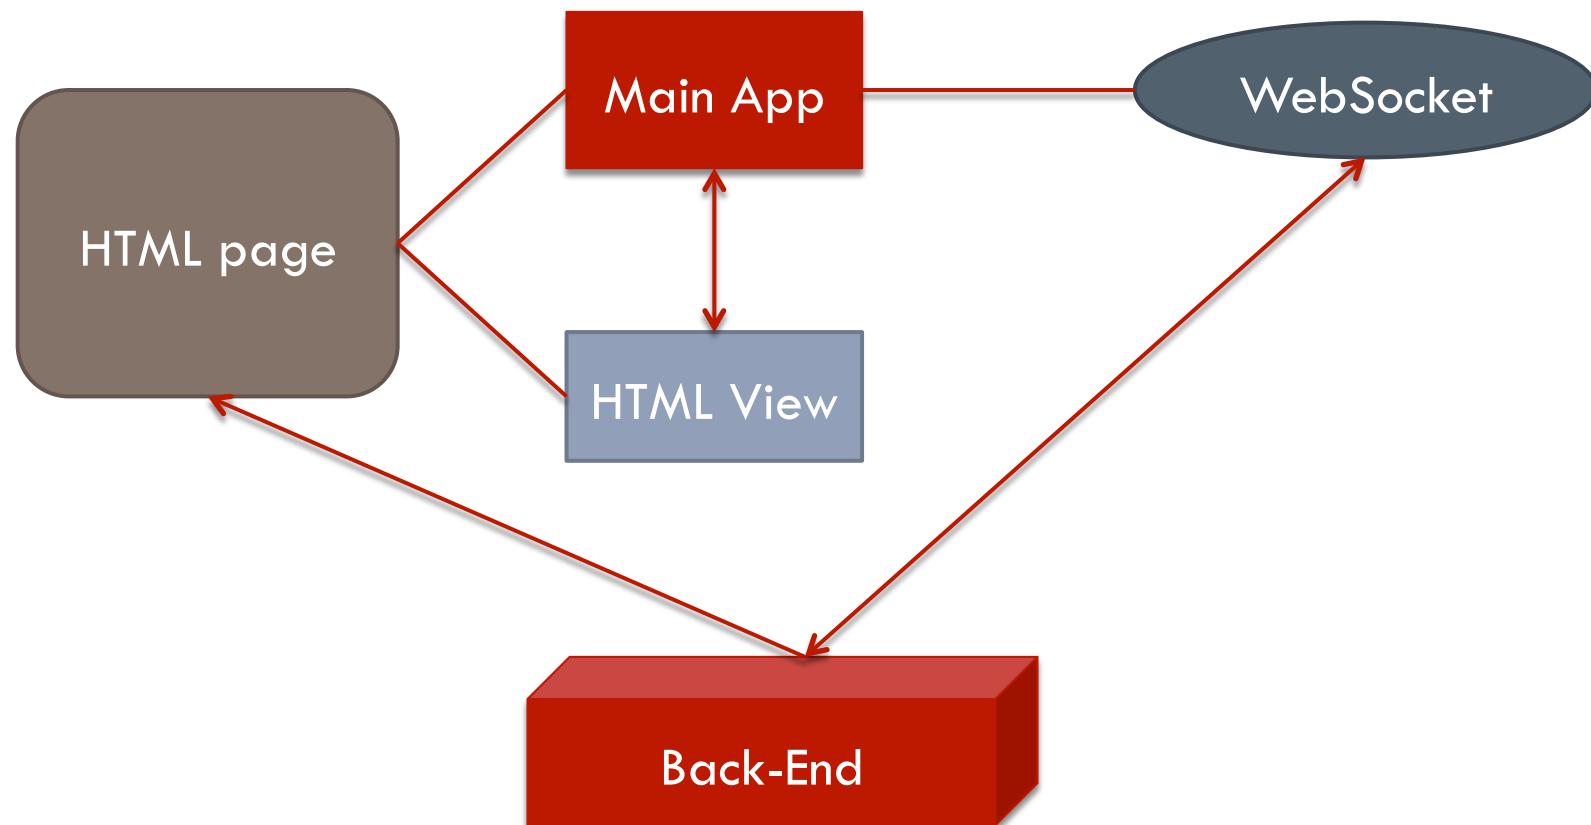

Approach

- Page = Application
- JavaScript – everywhere
- JSON as main data format
- Real-time interaction – WebSockets (page-server)
- Storage – MongoDB – document-oriented database based on JSON format

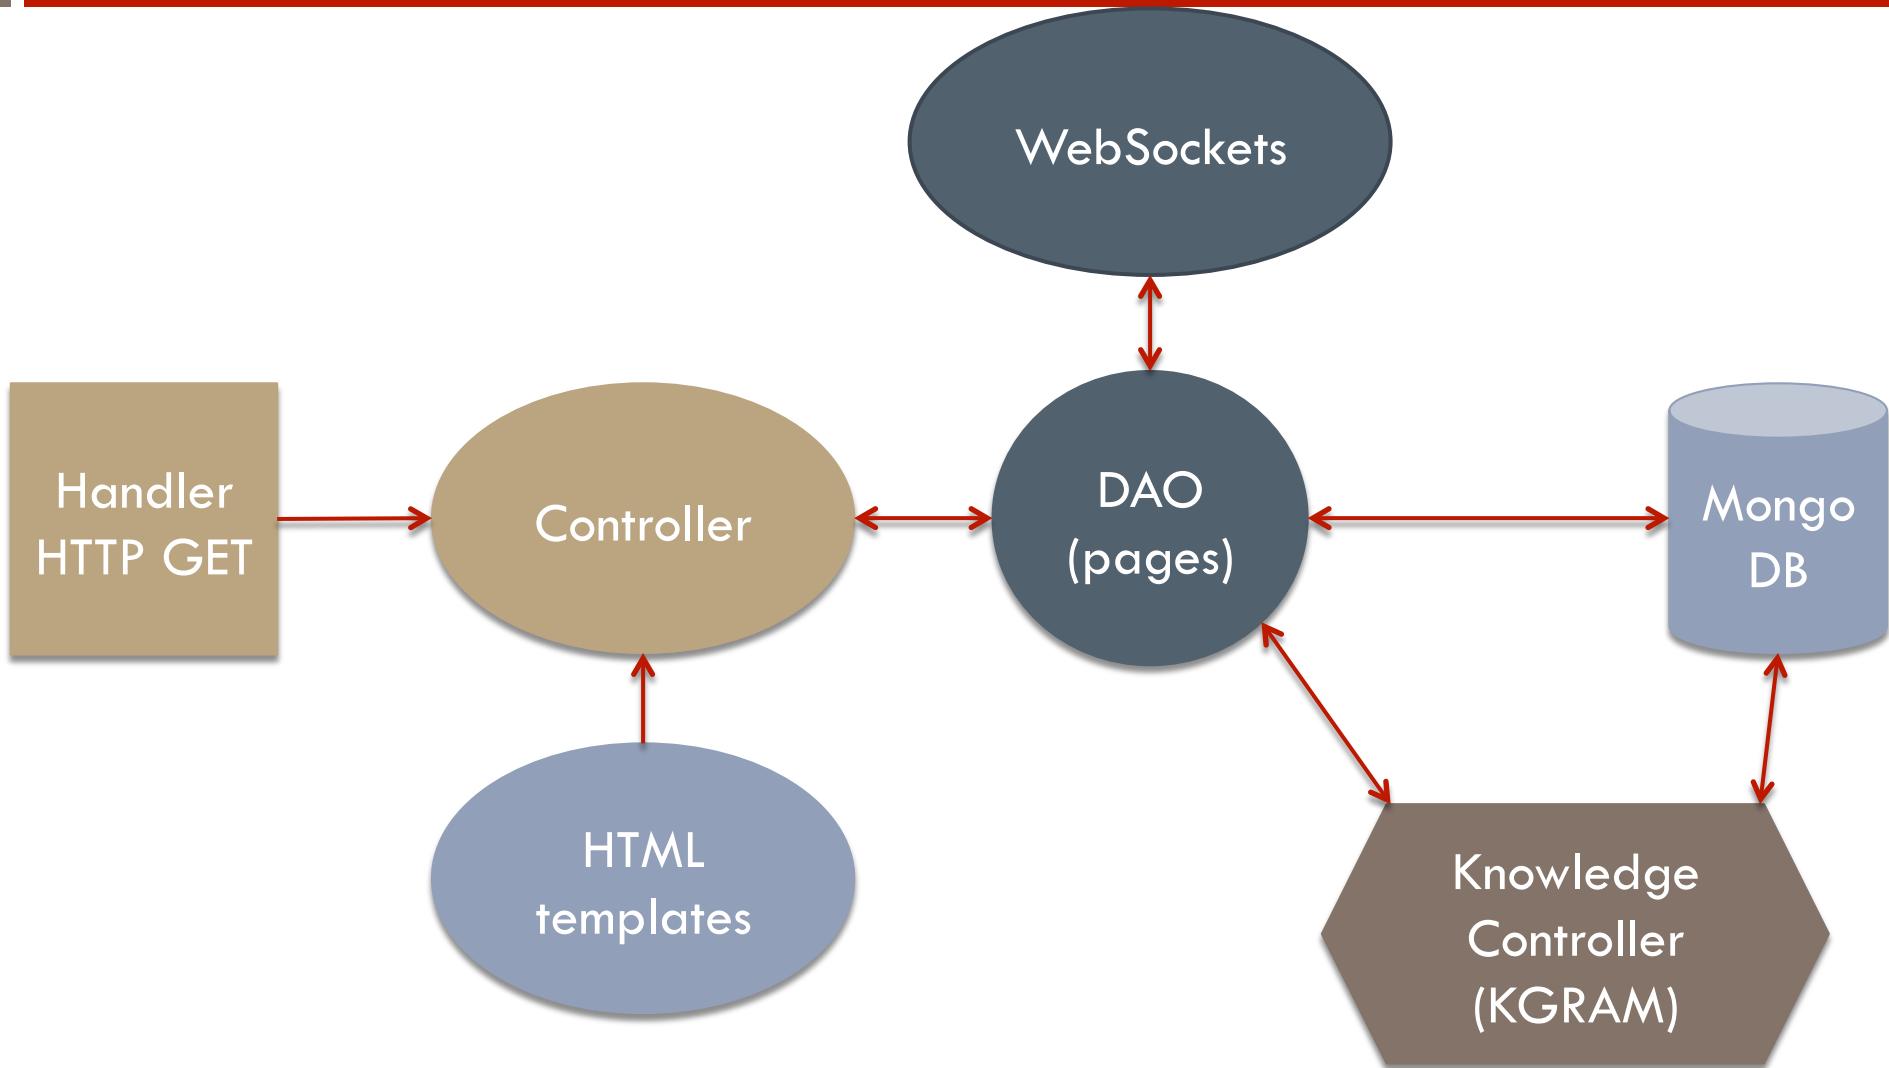

Technology

- Node.js – HTTP Server
 - nowjs – RPC library based on socket.io communication library: WebSockets, Comet etc
- MongoDB – database
- Mustache – logic less template engine
- Aloha – HTML5 in-place WYSIWYG editor
- ACE – code editor
- VIE2 – RDFa framework

Welcome to WikiNEXT !

[HTML mode](#) | [Apps](#) | [Save](#)

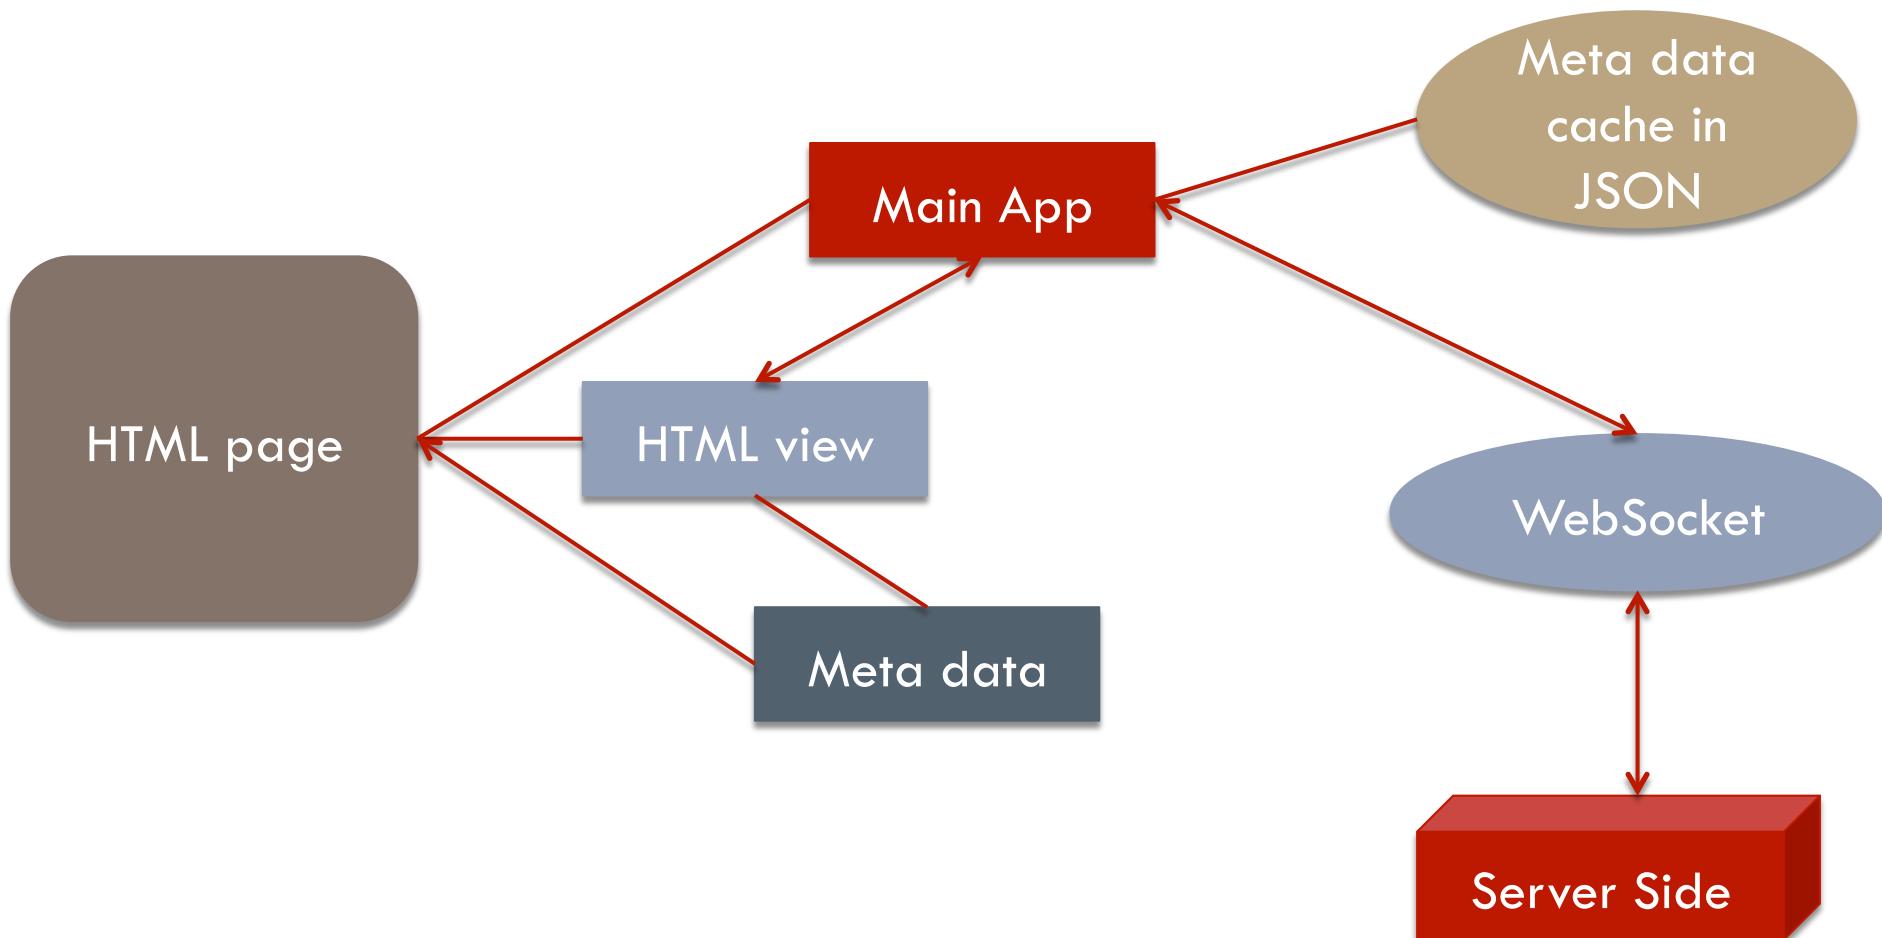

```
1  var paused = false;
2  // generic way to set animation up
3  window.requestAnimFrame = (function(callback){
4      return window.requestAnimationFrame ||
5          window.webkitRequestAnimationFrame ||
6          window.mozRequestAnimationFrame ||
7          window.oRequestAnimationFrame ||
8          window.msRequestAnimationFrame ||
9          function(callback){
10             window.setTimeout(callback, 1000 / 60);
11         };
12     })();
13
14  var canvas = document.createElement('canvas');
15  canvas.setAttribute('width', 880);
16  canvas.setAttribute('height', 350);
17  canvas.setAttribute('id', 'canvas');
18  $('.article').append(canvas);
19  //var canvas = document.querySelector("#demo");
20  var context = canvas.getContext('2d');
21
22  canvas.addEventListener('click', pauseOnOff);
23
```

Knowledge base

- Each page has a local knowledge database
- Global knowledge database is based on summary of all local knowledge databases
- Collections of triples in JSON-LD* format

* json-ld.org – last specification can be found here

Knowledge spread

Results

- Early alpha version is available
 - ▣ wikinext.herokuapp.com
 - ▣ mainline.essi.fr (will be available soon)
- Inline edition
- Main App – page render
 - ▣ Creating application into the pages
- Local Knowledge base and synchronization
- No data rewrite between server/client/database

Future work

- ShareJS – OT library, real-time collaborative edit
- Extend the Wiki API
- Integrate connectors for Linked Open Data
- Extend the ontologies we use for describing documents and users' interactions (ISICIL model based on FOAF, SIOC, DC, etc.)
 - ▣ Add applications
- Templates for applications (visualization of data, automatic annotation, LOD querying, etc.)
