

DAEN'15 Chairs' Welcome

It is our great pleasure to welcome you to the *Workshop on Diffusion, Activity and Events in Networks: Models, Methods and Applications (DAEN '15)*, associated with WWW 2015. This workshop aims to bring together researchers from academia and industry, as well as practitioners, that use data mining, machine learning, statistics, graph theory, information retrieval, causal inference, statistical physics, and sociology, to study diffusion, activity and events in networks. DAEN '15 gives researchers and practitioners a unique opportunity to share their perspectives with others interested in a broad spectrum, from theoretical analysis and algorithms to applications and empirical studies.

The call for papers attracted six submissions from Europe and the United States, which will be presented in a poster session during the workshop. We also encourage attendees to attend three keynote presentations by well-known (top) researchers within the field.

We hope that you will find this program interesting and thought-provoking and that the workshop will provide you with a valuable opportunity to share ideas with other researchers and practitioners from institutions around the world.
